- Explosives management plan

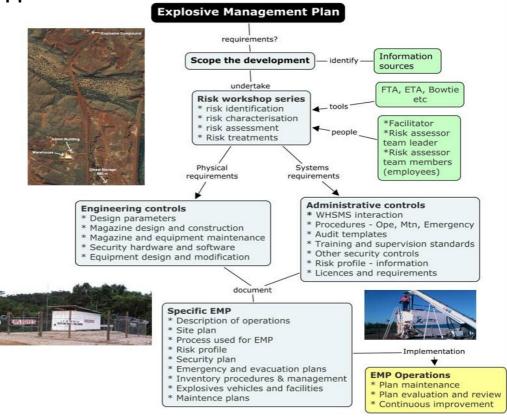

Explosives Management Plan Service

Blasting Geomechanics Pty Ltd (BGPL) are positioned to facilitate the development of a Explosives Management Plan (EMP). An EMP is a plan that documents how risks to health and safety of a person arising from the use of explosives will be eliminated or mitigated as far as is reasonably practicable. Such plans are required under the current legislative regime. Our approach is outlined below. The service may also include: periodic audits, review of existing systems, training and implementation support.

Benefits:

- External facilitator An experienced neutral third party facilitator can speed up the development of a EMP by being focused and by not needing to get involved with site politics. The risk workshop can be facilitated efficiently and documentation can follow without interruption to production and other staff duties.
- Worker involvement The content of a EMP is specified in the legislation but must be owned by site management and the workforce. Thus it is essential that consultative and participatory processes are used throughout.
- **Credibility and confidence -** Our approach (illustrated below) and BGPL experience gives confidence to all stakeholders that an appropriate process has been used to establish and implement the required EMP.

Our approach:

BGPL Services

Technical consulting
Training & seminars
Management support
